TAYLAN ÖZGÜR ÖZDEMIR

Software Engineer (Backend, Desktop & Fullstack)

Ankara, Turkey • +90 541 262 3184 • taylan147701@gmail.com • linkedin.com/in/taylan1477 • github.com/taylan1477

EDUCATION

İnönü University *Sep 2021 – Jun 2025*
Bachelor of Science in Computer Engineering, GPA: 3.09 / 4.00 Malatya, Turkey
Coursework: Object-Oriented Software Engineering, Database Systems, Operating Systems, Computer Networks

WORK EXPERIENCE

SoloRota *Jul 2025 – Jan 2026*
Software Engineer (Full-time) Ankara, Turkey

- Built and released 7 mobile applications to Google Play and the App Store.
- Connected client apps to backend REST APIs, adding local SQLite caching to handle poor internet connections.
- Fixed garbage collection spikes and CPU bottlenecks with profiler tools, keeping frame rates at a steady 60 FPS on Android.
- Maintained codebase with Git, wrote clean modular C# components, and automated test builds.

PROJECTS

MassVideoCutter: Desktop Video Trimming Tool *github.com/taylan1477/MassVCutter*
Java 23, JavaFX 23, Spring Boot 4, PostgreSQL 15, FFmpeg, Multi-threading

- Built a JavaFX desktop tool that batch-trims intros and outros from TV series and anime using FFmpeg CLI calls.
- Wrote an audio volume detector using FFmpeg astats filters to pinpoint opening theme music automatically.
- Structured trimming logic with Facade and Strategy patterns to switch between manual markers and audio detection.
- Set up a Spring Boot REST API with PostgreSQL and Flyway migrations to let users share episode trim timings.

CineNode: 4K Home Media Server and Telegram Bot *github.com/taylan1477*
Python, Docker, Telegram Bot API, Plex, Radarr, Prowlarr, Linux

- Configured a self-hosted media server using Docker containers for Plex, qBittorrent, Radarr, and Prowlarr.
- Enforced Direct Play playback to stream 4K and 1080p movies without maxing out host CPU on video transcoding.
- Built a Python Telegram bot to search movie releases, show real-time download speeds, and clean up disk space.
- Calculated active seeder ratios to skip dead or stalled downloads before starting transfers.

FitConnect: Gym Management and Training Mobile App *github.com/taylan1477*
React Native (Expo), TypeScript, Supabase, PostgreSQL, Deno Edge Functions

- Developed an iOS and Android app for personal trainers and gym clients using React Native and TypeScript.
- Handled authentication and data storage in Supabase PostgreSQL, writing Row Level Security policies for user roles.
- Implemented dynamic QR code scanning to verify trainer sessions in person and deduct credits from client packages.
- Wrote Deno edge functions for secure account creation without interrupting active trainer sessions.

TECHNICAL SKILLS

Languages: Java (Java 23, JavaFX), C#, Python, TypeScript, SQL (PostgreSQL), C++
Frameworks and Backend: Spring Boot 4, .NET, React Native (Expo), Supabase, REST APIs, Flyway
Media and Tools: FFmpeg, FFprobe, Docker, Linux (Ubuntu/WSL2), Git, GitHub, Maven, Postman, IntelliJ IDEA
Design and Architecture: Object-Oriented Programming (OOP), SOLID principles, Strategy and Facade patterns, Multi-threading
