TAYLAN ÖZGÜR ÖZDEMIR

Game Developer and Simulation Systems Engineer

Ankara, Turkey • +90 541 262 3184 • taylan147701@gmail.com • linkedin.com/in/taylan1477 • github.com/taylan1477

EDUCATION

İnönü University *Sep 2021 – Jun 2025*
Bachelor of Science in Computer Engineering, GPA: 3.09 / 4.00 Malatya, Turkey
Coursework: Data Structures and Algorithms, Object-Oriented Programming, Computer Vision, Distributed Systems

WORK EXPERIENCE

SoloRota *Jul 2025 – Jan 2026*
Game Developer (Full-time) Ankara, Turkey

- Programmed gameplay mechanics, state machines, and menus for 7 educational mobile games in Unity (C#).
- Hooked up Unity games to a backend REST API so quiz questions and score multipliers loaded without lag.
- Profiled draw calls and garbage collection spikes using Unity Profiler, keeping games at 60 FPS on Android.
- Used ScriptableObjects for item upgrades, level data, and save files to keep game code clean and modular.

PROJECTS

Aegis Forge: Tactical Terraforming Multiplayer Shooter *github.com/taylan1477/AegisForge*
Unity, C#, DOTS, Job System, Burst Compiler, NativeArray, FishNet, Headless Linux

- Built a multiplayer combat game where players reshape terrain in real time during matches.
- Processed height and mesh deformation across 10,000+ tiles simultaneously using the Unity C# Job System and Burst Compiler.
- Created a deterministic event-based replication model with FishNet running on a headless Linux dedicated server.

SoloIdle: Campus Management Idle Game *github.com/taylan1477/SoloIdle*
Unity 2D, C#, Asynchronous Networking, ScriptableObjects

- Programmed an idle economy loop where player revenue multipliers depend on answering quiz questions correctly.
- Structured building upgrade formulas, department research trees, and save data with ScriptableObject assets.

EvoluCat: 2D Metroidvania Platformer *github.com/taylan1477/EvoluCat*
Unity 2D, C#, Finite State Machines, Physics2D

- Built responsive 2D movement controls, wall-jumps, and telekinesis puzzles using a Finite State Machine structure.
- Implemented an encrypted multi-slot save system that stores player inventory, unlocked abilities, and map state.

TECHNICAL SKILLS

Game Engines: Unity (2D and 3D), Unity DOTS (C# Job System, Burst Compiler, Native Collections), Unreal Engine (Basics)
Languages: C#, C++, Python, Java, SQL, TypeScript, Bash
Multiplayer and Networking: FishNet, Client-Server Architecture, Dedicated Linux Game Servers, REST APIs
Architecture: Object-Oriented Programming (OOP), Data-Oriented Programming (DOP), State Machines, ScriptableObjects
Tools: Git, GitHub, Unity Profiler, Frame Debugger, JetBrains Rider, Visual Studio, Docker
