TAYLAN ÖZGÜR ÖZDEMIR

Software Engineer — Backend, Desktop & Fullstack Systems

Ankara, Turkey • +90 541 262 3184 • taylan147701@gmail.com • linkedin.com/in/taylan1477 • github.com/taylan1477

EDUCATION

İnönü University *Sep 2021 – Jun 2025*
Bachelor of Science in Computer Engineering — **GPA: 3.09 / 4.00** Malatya, Turkey
Relevant Coursework: Object-Oriented Software Engineering, Database Management Systems, Distributed Systems, Operating Systems, Computer Networks

PROFESSIONAL EXPERIENCE

SoloRota *Jul 2025 – Jan 2026*
Software Engineer (Full-time) Ankara, Turkey (On-site)

- Engineered modular domain services and asynchronous data pipelines for **7 production applications** deployed to live app ecosystems.
- Designed resilient REST API communication layers handling real-time data serialization, edge-case error recovery, and token authentication.
- Profiled runtime CPU bottlenecks and garbage collection allocations, improving multi-threaded execution stability and reducing latency by **25%**.
- Established structured Git versioning, automated build delivery workflows, and testable code boundaries following SOLID principles.

KEY PROJECTS

MassVideoCutter — Batch Video Processing & Trimming Suite *github.com/taylan1477/MassVCutter*
Java 23, JavaFX 23, Spring Boot 4, PostgreSQL 15, Flyway, Multi-threading, FFmpeg

- Engineered a high-throughput video processing desktop suite utilizing **JavaFX** and multi-threaded **FFmpeg/FFprobe** process wrappers for automated batch intro/outro removal.
- Built acoustic analysis algorithms (`VolumeAnalyzer`, `AudioAnalyzer`) analyzing decibel variations (`astats`) to detect intro sequences automatically.
- Applied **Facade** and **Strategy** design patterns to decouple video trimming engines, timeline waveform generators, and queue schedulers.
- Integrated a community recipe sync layer via **Spring Boot 4** and **PostgreSQL 15** with Flyway database migration scripts.

CineNode — Zero-Transcode Media Automation & Containerized Stack *github.com/taylan1477*
Python, Docker, Telegram Bot API, Plex Media Server, Radarr, Prowlarr, Linux

- Designed an automated 4K media server operating under a **Zero-Transcode (Direct Play)** policy, eliminating hardware transcode bottlenecks and bandwidth congestion.
- Developed a swarm seeder modeling algorithm (`eff_seeders = round(seeders * 0.25)`) to eliminate dead torrents and optimize ingress traffic.
- Containerized and deployed a microservice ecosystem (Plex, qBittorrent, Radarr, Prowlarr) managed via an asynchronous **Telegram Bot API** with live download tracking.

FitConnect — Full Stack Mobile & Cloud Gym Ecosystem *github.com/taylan1477*
React Native (Expo SDK 57), TypeScript, Supabase (PostgreSQL), Deno Edge Functions, QR Engine

- Engineered an end-to-end full stack mobile ecosystem featuring a TypeScript/React Native frontend integrated with a Supabase PostgreSQL backend.
- Configured **Row Level Security (RLS)** policies and deployed Deno-based **Supabase Edge Functions** for RBAC-governed user provisioning and billing.
- Implemented real-time volume/tonnage computation algorithms and timestamped dynamic QR verification modules for fraud-proof session check-ins.

TECHNICAL SKILLS

Languages & Core Tech: Java (Java 23, JavaFX), C#, Python, TypeScript, SQL (PostgreSQL), C++
Backend & Fullstack: Spring Boot 4, .NET Core / ASP.NET, React Native (Expo), Supabase, RESTful APIs, Flyway, Deno
Media & Audio/Video Engineering: FFmpeg, FFprobe, Video/Audio Transcoding, 48kHz Opus Codec, Waveform Visualization
Architecture & Patterns: Object-Oriented Design (OOD), SOLID, Facade, Strategy, Multi-threading, Microservices, RLS
DevOps, Systems & Tools: Docker, Linux (Ubuntu/WSL2), Git, GitHub, Maven, Postman, JetBrains IntelliJ & Rider
